
What this code is about

The C++ code first.cpp computes the first term in equation (3.55)

$$\sum_{k=0}^{\infty} \frac{(-1)^k \mu_{-(2k+2)}}{\beta^k} = \sum_{k=0}^{\lfloor \frac{d}{2} \rfloor - 1} \frac{(-1)^k}{\beta^k} (A_{2k} + B_{2k} + C_{2k}) + \sum_{k=\lfloor \frac{d}{2} \rfloor}^{\infty} \frac{(-1)^k}{\beta^k} D_{2k}, \quad (1)$$

where $\lfloor x \rfloor$ is the floor function and the term A_k is given by

$$A_k = \sum_{m=0}^k c_m m! \sum_{l=0}^m \frac{(-1)^l}{(l!)^2 (m-l)!} \int_0^{\infty} \frac{e^{-x/2}}{x^{k+\nu+1-l}} dx, \quad (2)$$

and

$$\int_0^{\infty} \frac{e^{-x/2}}{x^{k+\nu+1-l}} dx = \frac{(-1)^{k-l+1} \left(\frac{1}{2}\right)^{k-l+1+\nu} \pi}{\Gamma(k-l+1+\nu) \sin(\pi\nu)}. \quad (3)$$

The code requires the $d+1$ numbers c_m 's as inputs. These are read-in from the file Constant.txt. The code outputs values for $\beta = 10^{-5} - 10^{23}, 0.2$ and $\beta = 4$ contained in the file FIRST.txt.

The file compile.job is a SLURM script to compile the code in an HPC and generate an executable.

The file together.job is a SLURM script to run the executable in an HPC.
